Project Pack 1

UNIT 1 PROJECT - MY FUTURE IT CAREER

Duration: 2 lessons

Group size: Individual
Final product: Digital presentation

Project objective

In this project, you will research an IT profession and create a presentation about your possible future career in Information Technology.

Your task: Imagine that you are choosing your future career. Choose one IT profession that interests you. You can choose:

Computer programmer
Web designer
Network administrator
Software developer
IT support technician
Data analyst
Cybersecurity specialist
Game developer
Database administrator
Computer engineer

Step 1 — Research

Find information about your chosen profession.

Answer these questions:

1. What is the name of the job?
2. What does this person do?
3. What skills does this job require?
4. What software or hardware does this person use?
5. Where can this person work?
6. What qualifications are necessary?
7. What are the advantages of this career?
8. What are the possible disadvantages?
9. What is the future of this profession?
10. Would you like to have this job? Why or why not?

Step 2 — Create your presentation

Create a presentation of **6–8 slides**.

Your presentation should include:

1. Title
2. Job description
3. Main responsibilities
4. Required skills
5. Tools and technology
6. Qualifications
7. Advantages and disadvantages
8. Your personal opinion

Include pictures, icons or diagrams to make your presentation attractive.

Step 3 — Present your project

Give a **3–5 minute presentation** to the class.

You should speak clearly and use appropriate IT vocabulary. Try not to read directly from your slides.

Useful vocabulary

hardware	troubleshoot	computer system
software	install	digital technology
programming	configure	IT professional
network	maintain	qualifications
database	develop	skills
website	design	responsibilities
technical support	programming language	

Final question: **Would you like to work in IT in the future?**

Why or why not?

UNIT 2 PROJECT

BUILD YOUR OWN COMPUTER

Duration: 2 lessons
Group size: Individual
Final product: Computer specification + presentation

Objective: Learn about the main components of a computer and design a computer for a specific user.

The challenge: You work for a computer company. A customer wants you to build a computer. Choose one customer:

A student	A graphic designer	An office worker
A gamer	A programmer	A video editor

Step 1 — Choose the components

Your computer must include:

CPU	Graphics card	Keyboard
Motherboard	Power supply	Mouse
RAM	Computer case	
Storage	Monitor	

Step 2 — Make your decisions

For every component, explain:

What it is

What it does

Why you chose it

How much it costs

Calculate the **total price**.

Step 3 — Create the final product

Create a one-page computer specification sheet containing:

CUSTOM COMPUTER

Customer:

Purpose:

Total price:

Component	Model	Price	Reason
CPU			
RAM			
Storage			
Graphics card			
Monitor			

Step 4 — Present your computer

Give a **4-minute** presentation.

Explain why your computer is suitable for your customer.

Useful vocabulary

processor · CPU · motherboard · memory · RAM · storage · hard drive · SSD · graphics card · power supply · monitor · peripheral · component · compatible · performance · capacity · specification

Challenge: Can you design the best computer possible while staying under a fixed budget set by your teacher? **€6000**

UNIT 3 PROJECT

DESIGN A COMPUTER STORE

Duration: 2 lessons

Group size: Individual

Final product: Computer shop catalogue and sales presentation

Objective

Use your knowledge of computer hardware to create a computer store and recommend products to customers.

The situation

You are opening a new computer shop called:

_____

Your shop sells computers, components and peripherals.

Step 1 — Create your catalogue

Your shop must sell at least:

3 computers	3 mice	2 other peripherals
3 monitors	2 printers	
3 keyboards	2 storage devices	

For each product include:

Product name	Price
Main specifications	Target customer

Step 2 — Create three customer profiles

For example:

Customer A: A student with a limited budget.

Customer B: A professional graphic designer.

Customer C: A serious gamer.

Step 3 — Recommend products

Choose the most suitable products for each customer. Explain your recommendations.

Useful expressions:

I recommend...
This product is suitable for...
It is ideal for...
The main advantage is...
It is more powerful than...
It is cheaper than...
I would choose... because...

Step 4 — Sales presentation

Present your store to the class.

Your presentation should include:

1. Shop name and logo
2. Products
3. Prices
4. Customer profiles
5. Recommendations

Useful vocabulary

price · budget · customer · specification · recommend · suitable · powerful · affordable · expensive · cheap · performance · feature · product · catalogue · retailer · supplier

Challenge: Create a special promotion such as: **BACK-TO-SCHOOL COMPUTER PACK**
Include the computer, peripherals and total price.

UNIT 4 PROJECT

IT EMERGENCY: FIX THE COMPUTER!

Duration: 2 lessons

Group size: Pairs
Final product: Troubleshooting guide + role-play

Objective

Learn how an IT technician identifies computer problems and provides solutions.

The situation: You work for an IT support company.

A customer calls because their computer is not working correctly.

Choose one problem:

The computer will not start.

The screen is blank.

The computer is very slow.

The keyboard does not work.

The mouse does not work.

There is no Internet connection.

The printer does not work.

The computer is overheating.

There is no sound.

Step 1 — Diagnose the problem

Create a troubleshooting flowchart. For example:

The computer does not start

↓

Check the power cable

↓

Is it connected?

↓

YES → Check the power button

↓

NO → Connect the cable

Step 2 — Find possible solutions

List at least **five troubleshooting steps**.

Use **expressions** such as:

First, check...

Next, try...

Make sure that...	Check the connection.
If this doesn't work,...	Try another cable.
Restart the computer.	Contact technical support.

Step 3 — Create a support dialogue

Student A = **IT technician**

Student B = **Customer**

The customer explains the problem and the technician asks questions and provides solutions.

Step 4 — Role-play

Perform your dialogue in front of the class.

Length: 3–5 minutes.

Useful vocabulary

problem · fault · troubleshoot · repair · technician · customer · connection · cable · restart · switch on · switch off · install · uninstall · update · check · replace · fix · solution · technical support

Challenge: Add a second possible problem to your scenario and explain how the technician deals with it.

Final reflection. Answer:

What is the most important skill for an IT support technician: technical knowledge, communication, patience or problem-solving? Explain your choice.

Project Pack 2

UNIT 5 PROJECT

CREATE AN IT HELPDESK

Duration: 2 lessons

Group size: Pairs

Final product: IT helpdesk service + telephone role-play

Objective

Create an IT helpdesk and practise professional communication with customers who have technical problems.

The situation

Your company has created a new IT helpdesk.

Customers can contact your helpdesk when they have problems with their computers, software or Internet connection.

Step 1 — Create your company

Choose:

Company name
Logo
Telephone number
E-mail address
Opening hours
IT services

Step 2 — Create common problems

Prepare at least **six customer problems**.

For example:

My computer won't start.

I can't connect to the Internet.

I have forgotten my password.

My printer isn't working.

My computer is very slow.

I can't open a file.

Step 3 — Prepare the telephone conversation

One student is the **customer** and another is the **IT technician**.

The technician should:

1. Greet the customer.
2. Ask for their name.
3. Ask about the problem.
4. Ask questions to diagnose it.
5. Give instructions.
6. Check that the problem is solved.
7. End the call politely.

Useful expressions

How can I help you?
Could you describe the problem?
Could you give me your name, please?
Can you check...?
Please restart your computer.
I'll see what I can do.
I'll transfer you to the technical department.

Thank you for calling.

Step 4 — Role-play

Perform a **3–5 minute** telephone conversation.

Do not read the complete dialogue.

Useful vocabulary

helpdesk · customer · technician · technical support · problem · issue · password · connection · account · instructions · solution · transfer · troubleshoot · call · message

UNIT 6 PROJECT

THE DIFFICULT CUSTOMER

Duration: 2 lessons

Group size: Pairs

Final product: Customer-service role-play

Objective

Develop professional communication skills and learn how to deal with customer complaints.

The situation

You work in an IT company.

A customer is unhappy because a computer product or service has caused a problem.

Step 1 — Create the complaint

Choose one situation:

A computer arrived late.

The wrong product was delivered.

A computer stopped working.

The customer was charged the wrong price.

Technical support did not solve the problem.

A product is missing some accessories.

Step 2 — Write the customer profile

Include:

Customer's name

Product

Problem

Date of purchase

Expected solution

Step 3 — Prepare the conversation

Student A = **Customer**

Student B = **Customer-service representative**

The customer should explain the problem clearly.

The representative should:

Listen carefully.

Apologise when appropriate.

Ask questions.

Remain polite.

Explain the possible solution.

Offer an appropriate solution.

Useful expressions

I'm sorry to hear that.

I understand your problem.

Could you explain what happened?

Let me check your order.

We can replace the product.

Would you like a refund?

I'll speak to my manager.

Thank you for your patience.

Final role-play

Perform the conversation for **3–5 minutes**.

The customer should be challenging, but the conversation must remain professional.

Reflection

After the role-play, answer:

What makes good customer service?

UNIT 7 PROJECT

ORGANISE AN IT CONFERENCE

Duration: 2 lessons

Group size: Individual

Final product: Conference programme + presentation

Objective

Practise scheduling meetings and organising professional events.

The situation

Your company is organising a one-day technology conference called:

_____

The conference will take place at:

_____

Step 1 — Choose the theme

Choose a theme such as:

Artificial Intelligence	Social Media
Cybersecurity	Cloud Computing
Video Games	Programming
Future Technology	Technology in Education

Step 2 — Create the programme

Your conference must include:

Welcome speech	Lunch
At least 3 presentations	Workshop
Coffee break	Closing session

Create a timetable.

Time	Activity	Speaker
09:00	Welcome	

Time	Activity	Speaker
09:30		
10:30	Coffee break	
11:00		
13:00	Lunch	
14:00	Workshop	
16:00	Closing	

Step 3 — Schedule meetings

Imagine that one speaker cannot attend at the original time.

Write an e-mail proposing a new time.

Use:

Are you available at...?

Could we meet at...?

I'm afraid I'm not available then.

Would Thursday afternoon work for you?

Let's reschedule the meeting.

Step 4 — Present your conference

Explain:

The theme

The speakers

The target audience

The activities

The programme

Why people should attend

Useful vocabulary

conference · meeting · schedule · appointment · timetable · speaker · attendee · workshop · presentation · available · unavailable · reschedule · postpone · confirm · cancel

UNIT 8 PROJECT

DESIGN THE SMARTPHONE OF THE FUTURE

Duration: 2 lessons

Group size: Individual

Final product: Smartphone concept + advertising campaign

Objective

Explore smartphone technology and design an innovative smartphone for the future.

The challenge

You are working for a technology company.

Your team must design a new smartphone that will be launched in the future.

Step 1 — Design the phone

Decide:

Brand name

Model name

Screen size

Storage capacity

Battery life

Camera

Operating system

Security features

Connectivity

Special features

Price

Step 2 — Invent three new features

Think of features that current smartphones do not normally have.

For example:

Holographic display

Solar charging

AI personal assistant

Flexible screen

Advanced translation system

Health-monitoring technology

Explain how each feature works.

Step 3 — Create an advertisement

Create a poster or digital advertisement.

Include:

PRODUCT NAME

SLOGAN

MAIN FEATURES

PRICE

CALL TO ACTION

Step 4 — Product presentation

Give a **4 minute** presentation.

Convince your audience that your smartphone is innovative and useful.

Useful vocabulary

smartphone · touchscreen · application · app · operating system · camera · battery · storage · processor · wireless · Bluetooth · GPS · fingerprint · facial recognition · connectivity · feature · innovative · portable

UNIT 9 PROJECT

BECOME A DIGITAL RESEARCHER

Duration: 2 lessons

Group size: Individual

Final product: Digital research report

Objective: Learn how to search for reliable information online and communicate research findings clearly.

The challenge

Choose an IT-related question that you would like to investigate. Examples:

How will AI change education?

How does cloud computing work?

How have smartphones changed our lives?

What is the future of gaming?

How can people protect their online privacy?

How do search engines work?

What will computers be like in 20 years?

Step 1 — Search

Find information from at least **three different sources**.

For each source, record:

Website or publication

Author, if available

Date

Main information

Why you consider the source useful

Step 2 — Compare information

Do not simply copy information.

Compare the sources and identify:

Similar information

Different information

Facts

Opinions

Information you cannot verify

Step 3 — Write your report

Your report should contain:

1. **Title**
2. **Introduction**
3. **Research question**
4. **Main findings**
5. **Comparison of sources**
6. **Conclusion**
7. **Sources**

Step 4 — Present your findings

Give a **4–5 minute presentation**.

Use your own words.

Useful vocabulary

search engine · keyword · website · source · reliable · information · research · fact · opinion · evidence · author · publication · date · search · compare · verify · reference · report

Digital literacy challenge

Find one piece of information online that you initially believe is true.

Then investigate it using another reliable source.

Explain whether you were able to **verify** it and how you checked it.

Project skills developed in Units 6–10

By the end of these five projects, students will have practised:

Professional communication

Customer service

Telephone skills

Scheduling and organisation

Presentation skills

Product design

Advertising

Internet research

Source evaluation

Digital literacy

Project Pack 3

UNIT 10 PROJECT

CHOOSE THE RIGHT SOFTWARE FOR A BUSINESS

Duration: 2 lessons

Group size: Individual

Final product: Software proposal + presentation

Objective

Understand how different types of software can help a business and recommend appropriate solutions for a company.

The situation

You are IT consultants. A new company has asked you to recommend the software it needs.

Choose a company:

Travel agency

Restaurant

Online shop

School

Advertising agency

Hotel

Sports centre

Step 1 — Analyse the company

Find out what the company needs to do every day.

For example:

Write documents	Create presentations
Manage customers	Manage money
Send e-mails	Design images
Store information	Communicate with employees

Step 2 — Choose the software

Recommend at least **six types of software**.

For each one, explain:

Name	Who will use it
Type of software	Why the company needs it
Main function	Approximate cost

Step 3 — Create your proposal

Prepare a professional document called:

SOFTWARE SOLUTION FOR _____

Include a table:

Software	Function	Users	Cost	Reason

Step 4 — Present your proposal

Give a **4-minute presentation** to the company managers.

Explain why your software choices will help the business.

UNIT 11 PROJECT

CREATE A PROFESSIONAL DIGITAL DOCUMENT

Duration: 2 lessons

Group size: Pairs

Final product: Digital brochure + presentation

Objective

Understand how word-processing and image-editing software can be used to create professional documents.

The situation: A local tourism company wants to create a professional digital brochure to promote a new holiday destination.

You are a digital design team. Your job is to create an attractive brochure using word-processing and image-editing software.

Step 1 — Plan the brochure

Decide what information the brochure should include:

Destination name

Location

Main attractions

Hotels and accommodation

Restaurants

Activities

Prices

Contact information

Photographs

Step 2 — Edit the images

Choose appropriate photographs and improve them using image-editing software.

For example:

Crop images

Resize images

Adjust brightness and contrast

Remove unwanted areas

Add text

Change colours

Step 3 — Create the document

Use word-processing software to create a professional brochure.

Include:

A title

Tables or lists

Headings

Contact information

Text

A consistent design

Images

Step 4 — Present your brochure

Give a **4-minute presentation** to the tourism company.

Explain:

Your design

How you edited the images

The software you used

Why your brochure is useful

Useful vocabulary

word processor	resize	design
image editing	brightness	edit
document	contrast	insert
brochure	font	attractive
photograph	heading	
crop	layout	

UNIT 12 PROJECT

CREATE A SALES SPREADSHEET AND CUSTOMER DATABASE

Duration: 2 lessons

Group size: Groups of 3-4

Final product: Spreadsheet + database proposal + presentation

Objective

Understand how spreadsheets and databases can help a business organise information and analyse data.

The situation

A small clothing shop wants to improve the way it manages its sales and customer information.

You are IT consultants. Your task is to design a spreadsheet for sales and a database for customers.

Step 1 — Analyse the information

Decide what information the shop needs to store.

The spreadsheet could include:

Product name	Price	Monthly sales
Product code	Quantity sold	
Category	Total sales	

The database could include:

Customer name	Customer ID	Email

Telephone number	Address	Purchase history

Step 2 — Create the spreadsheet

Use spreadsheet software to:

Enter data
Use formulas
Calculate totals
Calculate averages
Sort information
Create a chart
For example, calculate the total sales for each product.

Step 3 — Design the database

Create a simple customer database.

Explain:

What information each record contains
What fields are needed
How the information can be searched
How the database can help employees
Step 4 — Present your solution

Give a **5-minute presentation**.

Explain how the spreadsheet and database will help the shop work more efficiently.

Useful vocabulary

spreadsheet	function	data
database	chart	calculate
cell	table	sort
row	field	search
column	record	analyse
formula	customer	

UNIT 13 PROJECT

DESIGN A COMPUTER NETWORK FOR A SMALL BUSINESS

Duration: 2 lessons

Group size: Individual

Final product: Network diagram + equipment proposal + presentation

Objective

Understand how computer networks work and identify the equipment needed to build a small business network.

The situation

A new advertising agency is opening an office with 15 employees.

The company needs a network that allows employees to share information, access the Internet and communicate with each other.

You are a network consultant.

Step 1 — Analyse the requirements

The office needs:

15 computers

Internet access

Wi-Fi

Access to company resources

Shared files

A printer

Secure communication

Step 2 — Choose the network equipment

Recommend the equipment the company needs. For example:

Router

Switch

Wireless access point	Server
Network cables	Printer
Network cards	

For each item, explain:

Name	Why the company needs it
Function	Approximate cost
Where it will be used	

Step 3 — Design the network

Create a simple network diagram showing:

Computers	Server
Router	Printer
Switch	Internet connection
Access point	

Use arrows or lines to show the connections.

Step 4 — Present your network

Give a **5-minute presentation** to the company managers.

Explain how the network works and why you selected each piece of equipment.

Useful vocabulary

network	Wi-Fi	wireless
router	Ethernet	wired
switch	cable	share
server	connection	connect
client	Internet	secure
access point	network device	

UNIT 14 PROJECT

CHOOSE AND INSTALL AN OPERATING SYSTEM

Duration: 2 lessons

Group size: Individual

Final product: Operating-system comparison + installation guide + presentation

Objective: Understand the role of an operating system and the main steps involved in installing one.

The situation

A new company needs to buy computers for its employees. The managers must decide which operating system is appropriate for the company.

You are IT consultants.

Step 1 — Compare operating systems

Research different operating systems, such as:

Windows

Linux

macOS

ChromeOS

Compare:

Cost

Hardware requirements

Ease of use

Updates

Security

User interface

Software compatibility

Step 2 — Choose an operating system

Select an operating system for the company.

Explain:

Why you selected it

What type of employees will use it

What software they need

What hardware requirements are necessary

Step 3 — Create an installation guide

Prepare a simple installation guide.

Include steps such as:

1. Check the hardware requirements.
2. Back up important data.
3. Prepare the installation media.
4. Start the installation.
5. Select the language and region.
6. Create a user account.
7. Install updates.
8. Install necessary applications.
9. Configure security settings.

Step 4 — Present your proposal

Give a **4-minute** presentation explaining your choice and installation process.

Useful vocabulary

operating system
installation
hardware
software
compatibility
user interface
update
backup
account
settings
driver
system requirements
install
configure
restart
security

Project Pack 4

UNIT 15 PROJECT

CREATE A VIDEO AND SOUND PROJECT FOR A GAME

Duration: 2 lessons

Group size: Groups of 3-4

Final product: Game trailer + sound plan + presentation

Objective

Understand how video and sound can be used to create an engaging digital gaming project.

The situation

A new game company is developing a video game and needs a short promotional trailer.

You are part of the creative team.

Step 1 — Create the game concept

Decide:

Game title

Genre

Target audience

Main character

Setting

Objective

Main challenge

Possible genres:

Adventure

Sports

Racing

Strategy

Simulation

Puzzle

Step 2 — Plan the video

Create a storyboard for a **30–60 second trailer**.

Include:

Opening scene	Special effects
Characters	Text
Gameplay	Final message

Step 3 — Add sound

Plan the sounds and music for the trailer.

Include:

Background music	Character sounds
Sound effects	Voice-over

Explain why each sound is appropriate.

Step 4 — Present the game

Give a **5-minute presentation**.

Show your trailer and explain:

The game	The sound effects
The video	Your target audience

Useful vocabulary

video	voice-over	character
sound	trailer	gameplay
audio	storyboard	animation
soundtrack	frame	edit
sound effect	scene	record

audience

UNIT 16 PROJECT

BUILD A CLOUD-BASED WEBSITE FOR A BUSINESS

Duration: 2 lessons

Group size: Individaual

Final product: Website plan + hosting/cloud proposal + presentation

Objective

Understand website hosting and cloud computing and explain how businesses can use them.

The situation

A small restaurant wants to create a website where customers can see the menu, find the restaurant and contact the business.

You are IT consultants.

Step 1 — Plan the website

Decide which pages the website needs.

For example:

Home	Gallery	Booking
About us	Location	
Menu	Contact	

Step 2 — Choose website hosting

Research different hosting solutions.

Compare:

Price	Performance	Reliability
Storage	Security	Customer support

Step 3 — Use cloud computing

Identify ways the restaurant could use cloud services.

For example:

Store documents	Back up information
Store photographs	Access files from different devices
Share files	Manage business applications

Step 4 — Present your solution

Give a **4-minute presentation** to the restaurant managers.

Explain:

Your website structure	How the cloud can help the business
Your hosting solution	The approximate cost

Useful vocabulary

website	cloud computing	online
web page	cloud storage	data centre
hosting	backup	provider
domain	upload	reliable
server	download	access

share

UNIT 17 PROJECT

PROTECT YOUR BUSINESS ONLINE

Duration: 3 lessons

Group size: Groups of 3–4

Final product: Cybersecurity plan + awareness poster + presentation

Objective

Understand common online threats and develop a plan to protect a business and its employees.

The situation

A small online company has experienced several security problems. The managers want to improve their cybersecurity.

You are cybersecurity consultants.

Step 1 — Identify the threats

Investigate common online threats, such as:

Phishing	Data theft
Malware	Fake websites
Viruses	Social engineering
Weak passwords	Unauthorised access

Step 2 — Recommend security measures

Create a security plan.Include:

Strong passwords

Multi-factor authentication

Antivirus software

Firewalls

Regular backups

Software updates

Secure Wi-Fi

Employee training

Access controls

Step 3 — Create an awareness poster

Design a poster called: **"STAY SAFE ONLINE!"**

Include at least five cybersecurity rules. For example:

Never share your password.

Check suspicious emails carefully.

Use strong passwords.

Keep software updated.

Back up important files.

Step 4 — Present your security plan

Give a **5-minute** presentation.

Explain the main risks and how your recommendations can protect the company.

Useful vocabulary

cybersecurity

online safety

threat

malware

virus

phishing

password

firewall

antivirus

backup

hacker

privacy

personal data

secure

protect

risk

suspicious

attack

UNIT 18 PROJECT

APPLY FOR A JOB IN IT

Duration: 2 lessons

Group size: Groups of 3-4

Final product: Job application + mock interview + presentation

Objective

Learn how to apply for a job and develop effective interview skills.

The situation

A technology company is looking for a new employee.

You are going to apply for one of the following jobs:

IT technician

Network technician

Web designer

Customer support assistant

Computer programmer

Graphic designer

Step 1 — Find a job

Choose a fictional IT company and create a job advertisement.

Include:

Job title

Required skills

Responsibilities

Qualifications

Experience

Salary

Working hours

Step 2 — Apply for the job

Prepare a short job application.

Explain:

Why you are interested

Your experience

Your skills

Why you are suitable for the position

Your qualifications

Step 3 — Prepare the interview

Create questions for the interviewer.

For example:

Why do you want this job?

Do you work well in a team?

What are your main skills?

How do you solve problems?

What computer programs can you use?

Why should we hire you?

Prepare appropriate answers.

Step 4 — Do a mock interview

Two students can be interviewers and one student can be the candidate.

Afterwards, change roles.

Give a **5-minute presentation** about what makes a successful job interview.

Useful vocabulary

job	employee	salary
application	qualification	CV
applicant	experience	reference
interview	skill	teamwork
employer	responsibility	communication

problem-solving	hire
apply	candidate

UNIT 19 PROJECT

PREPARE A PROFESSIONAL CV

Duration: 1 lesson
Group size: Individual
Final product: Professional CV + cover letter

Objective

Learn how to prepare a clear and professional CV for a job application.

The situation

You are finishing your studies and want to apply for your first job in the technology sector.

You need to create a professional CV that presents your education, skills and experience.

Step 1 — Collect your information

Prepare information about:

Personal details	Personal skills
Education	Courses
Work experience	Achievements
Computer skills	Interests
Languages	

Step 2 — Organise your CV

Create a CV with clear sections:

Personal Information

Name and contact details.

Education

Schools, courses and qualifications.

Work Experience

Previous jobs, internships or voluntary work.

Computer Skills

For example:

Microsoft Office
Graphic design
Web design
Programming
Database management

Languages

List the languages you speak and your level.

Personal Skills

For example:

Teamwork
Communication
Organisation
Creativity
Problem-solving

Step 3 — Write a cover letter

Write a short cover letter for the job you want.

Include:

The job you are applying for
Why you are interested
Your most relevant skills
Your experience
Why you would be a good candidate
Step 4 — Present your CV

Give a **4-minute presentation**.

Explain:

How you organised your CV
Which information you included
Which skills are important for the job
How a good CV can help a job applicant

Useful vocabulary

CV
curriculum vitae
personal information
education
qualification
experience
skills
achievement
reference
cover letter
applicant
employer
career
position
application

professional	organise	apply
qualification	highlight
